

AI360 Production and Local Test Report

Prepared August 13, 2026 - auth routing, credit management, ExpressPay endpoint connectivity, local environment, production build, and smoke-test status.

Lane	Overall Status	Meaning
Production	PASS WITH NOTE	Production build passed. Live public pages, sign-in, sign-up, auth callback routing, and ExpressPay endpoint connectivity passed.
Local	PASS	Local env isolation, automated tests, database verification, localhost smoke, auth callback routing, and credit management E2E all passed.

Total tests/checks run	Passed or verified	Context
376	374 passed/verified	The two non-passing checks were live deployment readiness dependency checks tied to production database reachability, not auth routing, local env isolation, credits, or ExpressPay endpoint connectivity.

Production Tests

Test	Status	Evidence / Notes
Production env preflight	PASS	Result: READY.
Production build	PASS	Next production build completed successfully with routes generated.
Live deployment smoke	PASS WITH NOTE	57/59 checks passed. Public pages, security headers, robots, sitemap, llms.txt, manifest, and /app noindex passed. Remaining checks relate to production database readiness.
Live sign-in page	PASS	https://ai360.africa/sign-in returned HTTP 200.
Live sign-up page	PASS	https://ai360.africa/sign-up returned HTTP 200.
Live auth callback origin	PASS	Callback returns 307 to https://ai360.africa/app?auth_error=callback_failed .
ExpressPay endpoint connectivity	PASS WITH NOTE	Endpoint connectivity passed. Full ExpressPay completion still needs a real-money live payment test with a public HTTPS callback URL.

Local Environment Tests

Test	Status	Evidence / Notes
Local env override	PASS	AI360_DEPLOYMENT_ENV=development, NEXT_PUBLIC_APP_URL=http://localhost:3000, billing disabled, ExpressPay sandbox.
Automated test suite	PASS	247/247 tests passed.
Local Supabase Postgres verify	PASS	34 tables verified, RLS on, anon grants none, migrations applied through 0016_supabase_auth.sql.
Local smoke test	PASS	59/59 checks passed against http://localhost:3000 .
Local auth callback	PASS	Callback returns 307 to http://localhost:3000/app?auth_error=callback_failed .
Credit management E2E	PASS	New account credits, debit on work, balance persistence, and insufficient-credit blocking were verified end to end.
Local server cleanup	PASS	Local test server was stopped after verification.

Scope note: Google OAuth and email confirmation links were not rerun in this pass. Full ExpressPay completion still needs a real-money live payment test.
